Highly Integrated SAM4s SPT-7540 POS Terminal

St. Paul, MN – CRS announced the release of the SAM4s SPT-7540, an integrated POS terminal available with integrated power supply, MCR, printer, scanner and fingerprint reader—an entire POS workstation in a single, small footprint unit. The second generation SPT-7500 Series terminal provides a true flat display and the fan-free Celeron dual core 1037U CPU. The 1037U delivers benchmark performance almost triple that of the previous generation ATOM processors and enables the terminals to run the latest Windows 7™, POS Ready 7™ and Windows 8™ operating systems faster and more efficiently.

SAM4s SPT-7540

“Until now, there have been very few choices in the market for terminals with integrated printers,” said CRS VP of Sales John Soderquist. “The SPT-7540 is the leading design: a powerful processor, a very attractive look, a compact footprint, and easy operator access to the printer for receipts, paper changes or service. Installations are much cleaner with the terminal and peripherals housed in a single unit, without power supply bricks and the maze of connecting cables.”

The attractive true flat display resists environmental hazards and features vivid LED backlighting that runs cooler, uses less energy, and performs more reliably and last longer than traditional CCFL backlighting. The optional printer is the proven SAM4s Ellix 40 mechanism, featuring 220 mm/second print speed and a highly reliable anti-jam auto-cutter. Additional options include integrated WIFI, CFast CompactFlash memory, and integrated VFD, 15”, 9.7” or 7” LCD customer displays.
